Food groups

Amelia B Finaret, Honorary Lecturer

EDINBURGH
extraordinary futures await

Nutrients are found in foods, but people eat foods, not nutrients

- Most people don't need to estimate nutrients
- Nutrient amounts are hard to know for sure
- It is better to keep things simple
- Eating from a range of food groups is best
- Some nutrients are denser in certain food groups
- Combining food groups can enhance nutrients
- Combining food groups can enhance enjoyment

There are many food groups

Food groups can be classified from a nutrition, culinary, or botanical perspective

- Beans and legumes might count as vegetables
- Fats and oils might be their own food group, or not
- Some foods that we use as vegetables are fruits (peppers, tomatoes, zucchini)
- Roots and tubers might be assigned to the same food group as other starchy staples like grains
- All meat might be put together, or fish might be separated out by itself
- Protein foods might be grouped all together
- These choices depend on individual needs, available data, and questions that need answered

Dietary diversity means the number of food groups consumed

- Researchers measure dietary diversity in different ways
- More diverse diets help promote health
- There are many ways to have a diverse diet
- Meals should ideally consist of at least 3 different food groups

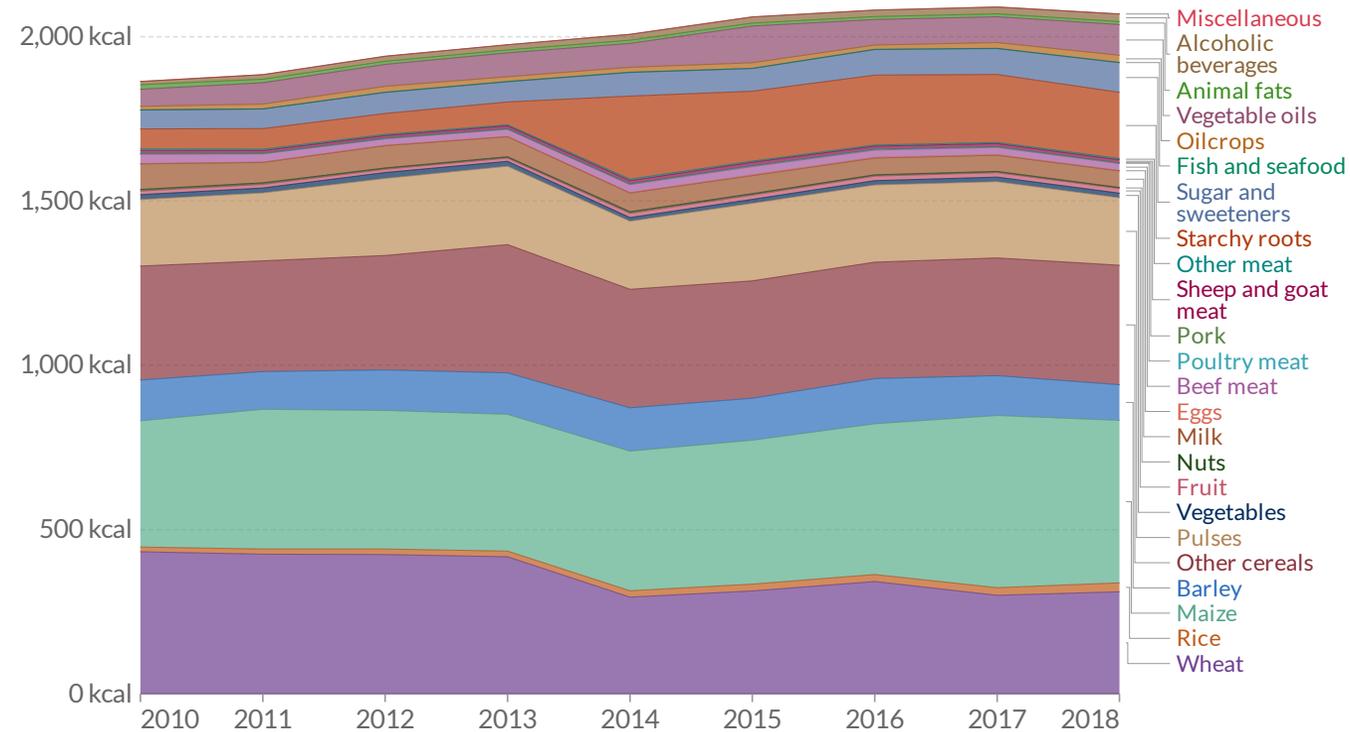

Food groups data

Dietary composition by country, Ethiopia, 2010 to 2018

Our World
in Data

Share of dietary energy supplied by food commodity types in the average individual's diet in a given country, measured in kilocalories per person per day.

Data source: Food and Agriculture Organization of the United Nations

The eatwell plate

Use the eatwell plate to help you get the balance right. It shows how much of what you eat should come from each food group.

Images from FAO database on food-based dietary guidelines

Data on food groups around the world

- The United Nations Food and Agriculture Organization (FAO) Statistical Office has data on food groups in their [Food Balance Sheets](#)
- Our World in Data compiles these data and other data on food groups very nicely, as summarized in their [Diet Compositions article](#)
- The FAO has a dataset called “[Food Based Dietary Guidelines](#),” for exploration around the world
